

## ENGAUSA Talent Hunts

ENGAUSA is the house of wisdom and a citadel of innovations. Through the talent hunts program, young talented people that cannot be heard or appreciated in our society are being identified and celebrated. Our society is made up of talented kids, but as a result of overwhelming social barriers and encouraging platforms that will be a guiding force to rock their dreams, these kids give up, and consequently, the talent becomes untapped and wasted.

ENGAUSA Talent Hunts is designed to technologically encourage and financially support talented kids thereby instilling motivating factors of doing more, of achieving more, of striving for nothing but excellence. Through applications of Reverse Engineering of some gadgets under this program, our talented kids have produced robots, cars, helicopters, and toys.

Another talented kid also constructed an amazing phone with multi-operational functioning. This amazing phone is named “FOREST MARSHAL” and it is expected to transform the agricultural industry with an unprecedented breakthrough. Already, at ENGAUSA, we have successfully constructed an inverter and charge controller amongst other Solar Power System-related circuits.
